✓In claim 1, line 15, delete "totally."

C<sup>1</sup>

--2 (amended). The power processing device according to claim 1, further including a first shielding [layer] winding on a first [exterior surface] layer of said multilayer printed circuit board, said first shielding winding being disposed between a first winding of [above] said first set of windings and a winding of said second set of windings.

3 (amended). The power processing device according to claim 2, further including a second shielding [layer] winding [disposed] on a second [exterior surface] layer of said multilayer printed circuit board [below], said second shielding winding being disposed between a second winding of said first set of windings and said winding of said second set of windings.

C<sup>2</sup>

10 (amended). A power processing device comprising:

- a) a multilayer printed circuit board having multiple layers of dielectric sheets;

conced.

- b) a transformer having,
- 1) a core extending through said layers of dielectric sheets; and
  - 2) a first set of electrically conductive windings, at least one of said windings of said first set of electrically conductive windings contained between two adjoining layers of said dielectric sheets; and[,]
- c) a first shielding [layer] winding disposed on a first [exterior surface] layer of said multilayer printed circuit board [above], said first shielding winding being disposed adjacent to and on one side of a winding of said first set of windings.

11 (amended). The power processing device according to claim 10, further including a second shielding [layer disposed] winding on a second [exterior surface] layer of said multilayer printed circuit board [below], said second shielding winding being disposed adjacent to and on the other side of said winding of said first set of windings.--
